

# Facility Management System

## About Us:

We are a close-knit, welcoming software engineering team that helps our clients address problems like regulatory compliance, emission tracking, and environmental impact. We seek people who want to have a direct influence on solving these challenges. Come help us tackle these issues! Located in DTC and brimming with Mines graduates!

## You are:

- Excited to immerse yourself into modern web technologies
- Sharp, highly-motivated problem solver
- Ready to learn, have fun, and contribute to a meaningful project
- Enthusiastic about communicating and willing to ask lots of questions!

## Project:

We are looking for a field session team to create a facility management system in the form of a web application. The finished product will allow companies like our clients to easily organize and access data related to their facilities from anywhere with an internet connection. Project work will be done on-site at Ecocion.

## Our Technology Stack:

- HTML5, CSS3, jQuery/JavaScript/TypeScript
- Microsoft .NET Web Stack (C#, ASP.NET, Entity Framework)
- Oracle Database

## Perks:

- Utopian workspace complete with beanbags, Jambox and Xbox
- Cornucopia of baked goods and gummy bears
- In-house waffle, pancake, or burrito breakfasts
- BuzzFeed Fridays
