

HTML5 Dynamic Presentations

Client

David Flammer, Data Verity, Inc. david@dataverity.net

Background

Ever seen Prezi (<http://prezi.com>)? It's pretty cool; more interesting presentations than Power Point anyway. There are some even cooler things you can do with HTML5, CSS, and Javascript:

<http://bartaz.github.io/impress.js/#/bored>.

(use the left and right arrow to navigate through the presentation)

Problem is, if you don't know HTML and CSS, it's hard to make something like this.

Project Goals and Requirements:

We want to build a graphical user interface to build sleek dynamic presentations in HTML5 and Javascript. Students will build one of these engines, possibly using impressJS as a starting point, and then build a graphical user interface to build these presentations. Then you will present it by using it to make your final presentation :)

Suggested Team Size:

3 students

Paid internships are available after Field Session for students that perform well.

Skills/Experience for CSM Students:

- Javascript/AJAX
- HTML5
- CSS
- SVG/Canvas
