

## Company Info

Well Information Technologies is a web based well management solution for the oil and gas industry. We manage the data so our customers can be the experts in their wells by offering real-time insights saving them time and money.

HULK USA is an industry leading oil and gas service company that provides operators cable and capillary string protection for ESP and gas lift operations.

## Project Description

As oil and gas fields become more and more developed, wellbores are having to be more and more deviated. This project offers an opportunity to work with real directional survey data from real wells to help determine potential failure points within the wellbore and create an interactive interface of the data.

## Team

2-4 students

## Location

It is expected the work will be remote with an in person kick off and wrap up meeting. Other in person meetings can be scheduled upon request. The remaining meetings will be held virtually.

## Skills

- Python
- Some database knowledge
- The ability to think critically and problem solve.

## Student Benefits

This project gives the team exposure to a unique data set and the opportunity to expand on their current skills. The project will be structured just like they would encounter in the real world. There is potential for internship opportunities following the completion of the project and dependent on performance.

The Students will be required to sign an NDA and another agreement assigning all intellectual property rights of the project to HULK USA.
